### **INTRODUCTION**

The Introduction should introduce the background to the work that has been carried out. It should contain citations to the key literature to support the rationale of the work and should lead to a clearly stated hypothesis or set of objectives. References must be added in the text with superscripts<sup>1</sup>.

### **METHODS**

This section should specify exactly what has been done experimentally. Subheadings can be used to differentiate the different methods in this section. Sample size and statistical methods used should be indicated in this section.

### **RESULTS AND DISCUSSION**

The results should be presented in a clear and concise manner. Only one (figure, table, graphic) with appropriate captions is allowed, which will be added to this section. The results section should contain sufficient information for the reader to understand the work, but it is not necessary to describe all details.

Discussion should summarize the observations and place the data into the context of the existing body of literature.

### **CONCLUSION**

The conclusions should be based on the provided facts and evidence.

### **REFERENCES**

References must be numbered. Keep the same style.

For example: 1. Smith G. et al., J. Biomech. 2:5-11, 2011

### **ACKNOWLEDGMENTS**

Authors should acknowledge any person, or funding agency that has made a significant contribution to the work.

“The authors would like to thank ... (Grant no: XXX) for providing financial support to this project”.
